

## Flexible, Scalable Configuration and Remote Management

Trend Micro ScanMail™ for Exchange 2000 and ScanMail eManager are designed to provide administrators with flexibility and options for protecting their environment from viruses and other malicious code during virus outbreaks. Remote management via ScanMail for Microsoft Exchange's Windows or Web-based console, or the Trend Micro Control Manager (TMC™) enables administrators to manage and deploy the latest engine or pattern file during a virus outbreak across the entire Exchange 2000 environment regardless of platform or physical location. Additionally, administrators can perform group configurations of any ScanMail option, create consolidated logs or reports, configure alerts or notifications, gather information about the latest virus outbreak, or check the status of any ScanMail server across the network.

## Active Message Filter

A new real-time message purge feature has been incorporated into ScanMail for Exchange 2000 v6.0 that blocks mass mailing of email viruses and specified attachments before they are delivered to the end user. The Active Message Filter also eliminates inbound and outbound messages containing zero-byte attachments before they are delivered to end user, preventing unproductive content from reaching end users both within and outside the organization.

## High-performance Scanning—Virus-Scanning API 2.0 and Windows 2000 Clustering Integration

- ▶ ScanMail supports and integrates completely with the Microsoft virus-scanning API 2.0, and preserves the integrities of the messages, attachments, and the Web Store databases
- ▶ ScanMail for Exchange 2000 v6.0 and ScanMail eManager v5.0 are fully compliant with Microsoft Windows 2000 Advance Server Clustering to provide virus protection and content security checking for clustered servers and to provide a secure 24x7 messaging and collaboration environment even during fail-over. The solution supports both Active/Active and Active/Passive clustering.

## Scalable Deployment on Exchange 2000 Server

Integration with Windows 2000 installer components makes it easy to deploy the different ScanMail components across Exchange 2000 servers. Administrators can remotely or locally deploy ScanMail to a single server or to multiple servers simultaneously with ease.

## Trend Micro ScanMail eManager Content Filtering and Anti-Spam plug-in

ScanMail eManager prevents inappropriate content from entering or leaving the company via the Exchange 2000 server. ScanMail eManager enables administrators to enforce consistent enterprise-wide email policies with rule-based content filtering to ensure maximum employee productivity and uptime, as well as a continuous message flow in the Exchange 2000 environment.

- ▶ **Inbound/Outbound Content and Attachment Scanning**  
ScanMail eManager has been enhanced to include both inbound and outbound scanning of message body content as well as scanning of text, HTML, and Word document attachments
- ▶ **Built-in Anti-Spam Rules and Policies** are fully customizable and empower administrators to specify what type of attachment or content can enter or leave the Exchange 2000 server

## Trend Micro ScanMail Active Support and Diagnostic Tools

ScanMail Active Support and Diagnostic Tools allow administrators to communicate with Trend Micro support engineers via email during virus outbreaks. With this built-in diagnostic tool, Trend Micro support engineers can easily provide real-time diagnostic and trouble shooting of any ScanMail issue.

## Evaluate Trend Micro ScanMail and eManager

All Trend Micro products can be downloaded for evaluation from Trend Micro's Web site at [www.trendmicro.com/download/](http://www.trendmicro.com/download/)

## System Requirements

- Minimum Intel® Pentium® or compatible 200MHz processor; 128MB RAM minimum, 256MB RAM recommended, and 50MB disk space
- Microsoft™ Exchange™ 2000 Server Service Pack 1, Microsoft Windows™ 2000 Server, Microsoft Windows 2000 Professional, and Microsoft Windows 2000 Advanced Server
- A Java-enabled Web browser that supports frames, such as Netscape Navigator 3.0 (or above) and Microsoft Internet Explorer 3.0 (or above) for Web-based management

\* Some awards shown may be for other current versions of ScanMail for Exchange

## Technical Support

Customers are entitled to virus pattern files, product updates and standard technical support via email, telephone or Trend Micro's Web site for one year from the date of their purchase of a license to the Trend Products at no additional charge. To continue to receive these services after the first year of the license, customers may purchase renewal maintenance on an annual basis. Enterprise customers can obtain enhanced technical support services through Trend Micro's Premium Support Program. TrendLabs global antivirus research and support centers back Trend Micro solutions with timely, high-quality service through Trend Micro's ISO 9002-certified global headquarters. Learn more about Trend Micro's service and support options at <http://www.trendmicro.com/support>.
