

TREND MICRO

# ServerProtect<sup>5</sup>

Comprehensive data storage virus protection

for Network Appliance<sup>™</sup> filers

Trend Micro ServerProtect<sup>™</sup> for Network Appliance<sup>™</sup> filers provides a comprehensive antivirus solution that is managed through an intuitive portable console that provides centralized virus scanning, pattern file updates, event reporting, and antivirus software configuration. Virus scanning takes place in separate scan servers running Windows 2000/NT. Multiple ServerProtect scan servers can be registered with one filer to provide better scan performance.

- ▶ Real-time bi-directional communication between ServerProtect scan server and filer ensures 24x7 connection
- ▶ Multiple scan servers can be registered with a filer for scalability and high performance
- ▶ Remote installation, maintenance, upgrade and uninstallation of ServerProtect software throughout the network from a central console
- ▶ Multi-threaded software architecture and a virus scanning engine designed for optimum performance, especially on servers with multiple CPUs
- ▶ Report logs track all virus events that occur across the network
- ▶ Alerts notify the administrator of virus outbreaks and emergency conditions

"... having an integrated version of Trend Micro's ServerProtect is an IT Administrator's dream come true. We now get the benefits of reporting logs and real-time scanning without any major impact to system performance. This is perfect! I've already been recommending Trend Micro's ServerProtect for Network Appliance filers to other IT administrators within our company and I expect them to be pounding down Trend Micro's doors when it's officially released."

— Josh Gifford, Senior NT Administrator, Siemens Power Transmission & Distribution

## Centralized Management

- ▶ Antivirus software on scan servers can be managed from a single management console
- ▶ Antivirus installations can be grouped into domains so multiple scan servers can be configured simultaneously
- ▶ Centralized reporting enables administrators to view their entire network's antivirus status

## Fast Scanning and Virus Pattern Updates

- ▶ ICSA-certified to detect and clean 100 percent of in-the-wild viruses
- ▶ Recursive scanning of most compressed file formats, including ARJ, Diet, LZEXE, LZH, PKLITE, PKZIP, and Microsoft Compress, as well as UUENCODE and MIME email message attachments
- ▶ Automatically downloads virus pattern files, scan engine, and program files and distributes them to all scan servers

## Task Manager

- ▶ Administrators easily manage virus maintenance tasks such as: initiating on-demand scanning, pattern and program file updates, printing/exporting/purging virus logs and setting parameters for real-time scanning
- ▶ Task Manager standardizes antivirus maintenance and saves time and effort when installing new scan servers

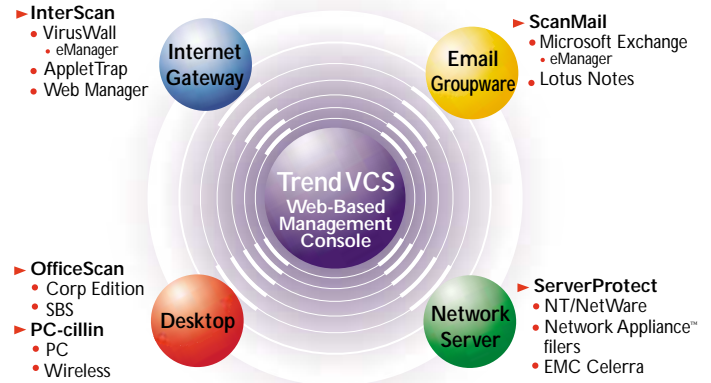

## Log Reports and Event Notification

- ▶ Virus and program events are written to a log file so administrators can view the antivirus history of their entire network in aggregate
- ▶ Log records can be analyzed within the ServerProtect management console or exported to other programs
- ▶ Virus and program events can trigger a notification to alert the administrator of harmful conditions. Alerts can be sent via a message box, pager, printer, Internet email, SNMP trap or can be written to the Windows NT event log.

## Evaluate ServerProtect

Trend Micro's products can be downloaded for evaluation from Trend Micro's Web site at [www.trendmicro.com/download](http://www.trendmicro.com/download).

## Trend Micro Enterprise Solution

## System Requirements

### Scan Server

- Windows 2000/NT Server 4.0 (Service Pack 1,3,4,5)
- Intel Pentium II 500MHz or faster (or equivalent)
- 50MB free disk space

### Information Server

- Windows 2000/NT Server 4.0 (Service Pack 1,3,4,5)
- Intel Pentium II 500MHz or faster (or equivalent)
- 64MB RAM or above recommended
- 50MB free disk space

### Management Console

- Windows 95/98/Me, and Windows 2000/NT 4.0 (Service Pack 1,3,4,5)
- Intel Pentium II 500MHz or faster (or equivalent)
- 64MB RAM or above recommended
- 50MB free disk space

### Network Appliance Filers

- The filer must have Network Appliance proprietary OS Data ONTAP 6.1 or above

\* Some awards shown may be for other current versions of ServerProtect

## Technical Support

Trend Micro provides extensive technical support via email, telephone, and our Web site. Customers are entitled to free virus pattern and program updates for one year, access to our online technical support database, the latest virus news, and other information via email or the Web. Enterprise customers can obtain additional services through Trend Micro's Premium Support Program. TrendLabs global antivirus research and support centers back Trend Micro solutions with timely, high-quality service through Trend Micro's ISO 9002-certified global headquarters. Learn more about Trend Micro's service and support options at <http://www.trendmicro.com/support>.

## About Trend Micro Inc.

With business units worldwide, Trend Micro, Inc. is a leader in Internet gateway, network, desktop, and PDA antivirus and content security. Trend Micro products are sold directly, through corporate resellers, VARs, and managed service providers.
